Industry-Leading
Applications and Management Tools

For more than 25 years, NACT has been the world's leading provider of prepaid application solutions. NACT controls more than 12 billion minutes of traffic annually, having sold and installed more than 650 switching platforms, in 26 countries around the globe.

NACT's advanced telecommunications solutions include application software, network management capabilities, switching gateway platforms, and Class 4/5 hardware and software solutions. NACT's technology sets the standard for value, comprehensiveness and reliability, and its solutions are used by hundreds of customers: including international carriers; competitive carriers; ISPs; and large domestic service providers.

The Industry's Leading Applications:

NACT's prepaid and postpaid applications provide all of the switching, signaling, provisioning, account management and communications applications needed to launch revenue-generating prepaid/postpaid services quickly, easily and cost-effectively.

These field-proven applications include: Prepaid Calling Cards, International Texting, Top Up capabilities, Automatic ANI Authentication, pre- and post-paid billing, wholesale transport and management, Least Cost Routing, and fraud control parameters (such as usage limitations, blocked destinations or credit card recharge restrictions). NACT's global applications support local, regional, specialty and global calling cards, and provide all of the functionality that Prepaid Service Providers (PSPs) require.

Carrier to Carrier Solutions:

NACT's carrier switching capabilities are designed for service providers seeking tandem, carrier interconnection, and international gateway and routing functionality between their network and other service providers.

Class 4/5 Softswitch capabilities offer maximum flexibility, with minimum complexity, for carrier-grade call control, routing, and translations. They include session border controller (SBC) and transcoding features needed to facilitate secure IP-to-IP, and next generation TDM-to-IP connectivity. NACT's Class 4/5 Softswitch enables service providers to peer directly with other carriers, and connect to the PSTN, all from a single platform.

Customized Billing and Switch Management Solutions:

At the core of every prepaid solution is a provisioning and management system. NACT's Retail Telephony platform ensures maximum accuracy, flexibility, and control for any prepaid calling card business. This solution works seamlessly with NACT's Prepaid applications, to handle provisioning, manage accounts, store comprehensive call detail records, and generate a wide variety of critical management and operational reports.

No matter what the requirements are for your business, NACT delivers customized solutions that provide all of the switching, signaling, provisioning, account management and communications applications needed to launch revenue-generating prepaid, postpaid, or carrier services quickly, easily, and cost-effectively.
